

SEMICONDUCTOR DEMAND ANALYSIS FOR SMART TECHNOLOGY – SMART CITIES, ENERGY, HOMES, TRANSPORTATION, FACTORY, HEALTH

Table of Contents

Chapter 1	Introduction	1-1
1.1	Smart Technology	1-1
1.2	Semiconductors And Connectivity	1-2
1.3	Problems In Creating A Smart Technology Market	1-3
Chapter 2	Smart Cities	2-1
2.1	Growth And Opportunities For Smart Cities	2-1
2.2	Semiconductors In Smart Cities	2-8
2.2.1	Introduction	2-8
2.2.2	Enabling Technologies	2-11
2.2.2.1	ZigBee	2-13
2.2.2.2	Dash7	2-13
2.2.2.3	3G and LTE	2-13
2.2.2.4	RFID and NFC	2-14
2.2.3	Sensor Platforms	2-16
2.2.3.1	Wireless Sensor Networks (Non-Unified)	2-16
2.2.3.2	Wireless Sensor Networks (Unified)	2-21
2.2.3.3	Cloud and Sensors	2-22
2.2.4	Sensor Applications	2-25
2.2.4.1	Water Distribution Systems	2-25
2.2.4.2	Electricity Distribution Systems	2-28
2.2.4.3	Monitoring Bridges and Seismic Activity	2-31
2.2.4.4	Environmental Monitoring	2-32
2.2.4.5	Surveillance	2-32
2.2.4.6	Public Services—Law Enforcement and Fire Fighting	2-33
2.2.4.7	Crowd Sourcing	2-34
2.2.4.8	Summary of Benefits of Smart Sensors	2-35
2.3	Smart City Pilot Projects	2-35

2.4	Smart City Challenges	2-39
Chapter 3	Smart Energy and the Smart Grid	3-1
3.1	Introduction	3-1
3.2	Future Smart Grid Operations	3-2
3.3	Changing Grid Topology	3-6
3.4	Advanced Metering Infrastructure (Ami)	3-9
3.5	Distribution Automation Technologies	3-13
3.6	Electric Mobility Ecosystem	3-14
3.7	Communications Systems	3-16
3.8	Semiconductors	3-18
3.8.1	Smart Grid	3-18
3.8.2	Wireless Sensor Networks (WSN)	3-19
3.8.3	Smart Meters	3-22
Chapter 4	Smart Transportation And Mobility	4-1
4.1	Introduction	4-1
4.2	Wireless Vehicle Communications	4-2
4.2.1	Vehicle Sensing Methods	4-2
4.2.2	Benefits Of Smart Technology	4-4
4.3	Vehicle To Vehicle (V2V) Smart Sensors4-7	
4.3.1	Power-Line Communications	4-7
4.3.2	Bluetooth And WiFi	4-10
4.3.2.1	Monolithic Integration of Bluetooth and WiFi	4-14
4.3.2.2	Dedicated Short-Range Communications To Enable Secure V2V	4-21
4.3.2.3	Advanced Driver Assistance Systems (ADAS)	4-23
4.3.3	WSN Applications In Intelligent Transportation	4-25
4.3.3.1	Sensing Of Traffic Flows	4-25
4.3.3.2	City Logistics	4-27
4.3.3.3	WSN In Traffic Infrastructures	4-28
Chapter 5	Smart Home, Smart Buildings and Infrastructure	5-1

5.1	Introduction	5-1
5.2	Semiconductors And Communications	5-2
Chapter 6	Smart Factory And Smart Manufacturing	6-1
6.1	Introduction	6-1
6.2	Initiatives	6-2
6.3	Semiconductor Requirements For The Smart Factory	7-8
Chapter 7	Smart Health	7-1
7.1	Introduction	7-1
7.2	Standards	7-2
7.3	Wireless Body Area Networks (Wbans)	7-7
7.4	Sensors	7-9
7.5	Healthcare Connected Devices	7-15
Chapter 8	Market Forecasts	8-1
8.1	Network Controllers	8-1
8.2	Microcontrollers	8-4
8.3	Sensors	8-14
8.4	Market Forecasts	8-17
8.4.1	Smart Technology – Sensors	8-20
8.4.2	Smart Technology – MCUs	8-25
8.4.3	Smart Technology – Gateways/Routers	8-31
List of Figures		
1.1	Smart Technology Areas Of Focus	1-5
2.1	Number Of Mega-Cities In 2030	2-3
2.2	World Population Growth	2-4
2.3	Typical European Citizen Of A Smart City	2-6
2.4	Advanced Metering Infrastructure (AMI) System	2-10
2.5	Architecture Of A Wireless Sensor Node	2-17

2.6	COAP TO HTTP Conversion Through A Proxy In The Cloud	2-23
2.7	Applications Of Sensing In Water Distribution Systems	2-26
2.8	Vibration, Pressure, And Flow Sensors In A Pipeline	2-27
2.9	Location Of Current Sensors In A Transmission Line To Monitor The Line's State	2-30
2.10	Relationships Between Smart Cities And It	2-42
3.1	Smart Grid Infrastructure	3-5
3.2	The Power Grid And The Substation Automation Communication Network	3-7
3.3	Smart Grid Representation	3-8
3.4	Internet Of Energy: Residential Building Ecosystem.	3-10
3.5	Electric Mobility Ecosystem	3-15
3.6	General Architecture Of Online Monitoring System For Transmission Line Based On WSNs	3-21
3.7	A Ti-Enabled Smart Electrical Meter Supporting Multiple Connectivity Options	3-23
3.8	A Ti-Connected Data Concentrator Block Diagram	3-25
4.1	Weight In Motion (WIM) System	4-3
4.2	Standalone Energy Ecosystem	4-6
4.3	Communication Ecosystem Based On Plc Technology	4-8
4.4	Semiconductor Integration For Connected Car	4-12
4.5	Toshiba's Tc35662 Combination Ic	4-15
4.6	Intel In Vehicle Solution	4-20
4.7	Wireless Lan Link	4-22
4.8	Freescale's QORIVVA MPC5606E	4-24
5.1	Example Of Smart Home	5-4
5.2	Smart Home Platform	5-5
5.3	Example Of Connected Home Gateway Architecture	5-7
5.4	Basic Sensor Node Architecture	5-9
5.5	Zigbee/Ieee802.15.4 Network Topology	5-11
5.6	Advanced Sensor Node Architecture	5-13
5.7	M16c/6b Group Block Diagram	5-17
5.8	Zigbee Applications For The Smart Home	5-18
6.1	Industry 4.0 Timeline	6-3
6.2	Smart Factory Of The Future	6-10
7.1	Smart Health Platform	7-4

7.2	Communication Layers In Smart Health Platforms	7-6
7.3	Digital Output Sensor	7-10
7.4	Essential Functions Of The All Sensors Dlv.	7-11
7.5	Si701x/2x Sensor	7-12
7.6	Analog Devices Adis16203	7-14
7.7	Connected Medical Devices	7-16
8.1	Kinetsis KL03: Freescale Semiconductor	8-6
8.2	MCU Partitioning	8-15
8.3	Sensor Forecast For Smart Technology	8-22
8.3	Sensor Forecast By Application	8-23
8.4	Sensor Forecast By Application (Percentage Of Units)	8-24
8.6	MCU Forecast For Smart Technology	8-27
8.7	MCU Forecast By Application	8-28
8.8	MCU Forecast By Application (Percentage Of Units)	8-29
8.9	MCU Revenues For Smart Technologies By Device Type	8-30
8.10	Gateway/Router Forecast For Smart Technology	8-33
8.11	Gateway/Router Forecast By Application (Percentage Of Units)	8-34
List of Tables		
2.1	Comparison Of Communication Standards	2-12
2.2	Comparison Of Various Sensor Motes	2-19
2.3	Benefits Of Advanced Sensors In Smart Cities	2-36
5.1	Communication Technologies	5-10
8.1	Current Smart City Pilot Project	8-3
8.2	Market Forecast of Smart Technology Sensors	8-21
8.3	Market Forecast of Smart Technology MCUs	8-26
8.4	Market Forecast of Smart Technology Gateways/Routers	8-32
